The Role of Raptors in the Morro Bay Estuary

With Kara Hagedorn and Sunshine

What species of raptors live around the Estuary: The sandspit, Morro Rock, the city, state park lands, Elfin Forest, and ranchlands of the watershed? Join Kara Hagedorn and a live Red-tailed Hawk named "Sunshine" to review identification and adaptations of the birds of prey in this area, while showing how the unique topography and habitats of Morro Bay wondrously support them. Presentation made possible with the support of a National Estuary mini-grant and MCAS.

Monday, April 17, 2006 at 7:00 pm

Laguna Middle School – multi-purpose room
11050 Los Osos Valley Rd, San Luis Obispo CA 93405

This presentation is the sixth in the Natural History Series of MCAS brought to members and the general public FREE of charge. Bring your friends. Information: 528-8193
